

WiSACWIS Release 1.6.2 Notes

Activity Notes

4275	Fatal error printing large number of case notes	A worker can now print case notes without getting a Fatal Application Error when a lot of case notes are returned in a search. Workers having older PCs with less RAM may still experience a significant delay or receive a virtual memory error when trying to print a large number of case notes due to the lack of resources on their PC. This can be avoided by narrowing the search timeframe to print fewer notes at one time.
------	---	--

Foster Care/Out of Home Placements

4428	Cannot create new elig if other voided elig exists	Workers are now able to create new eligibility by checking the "This Placement is the Result of a Transfer" checkbox if all other eligibility and redetermination records are ended or voided.
------	--	--

AFCARS

5090	AFCARS error changes not saved to source	When a child has only one editable AFCARS error in elements 10 - 15 or 26 - 40, the changes are now being saved back to the source table.
------	--	---

Assessment

5514	Cannot open child welfare report	Child Welfare Report templates that had been created prior to release 1.6, which disabled the ability to create the Child Welfare Report template from the Assessment page, can once again be accessed from the Assessment page.
